

BUFFALO OFFSET DISC HARROW

HEAVY TYPE, TRAILED, FULLY ADJUSTABLE ANGLE ON AXLES

Heavy type wide offset Disc Harrows are trailed type machines with two wheels that can be easily transported to the field. Takes advantage of a hydraulic lifting system used for breaking clods and mixing soils for the seed bed as well as chopping weeds, stems and breaking stubble with the 560mm and 610mm discs.

Works easily in wet soil and can even be used instead of a plough. If implemented after harvesting, this disc harrow can prepare soil directly for sowing along with mixing the stubble with the soil to serve as organic fertiliser.

Model		Buffalo 2061	Buffalo 2461
Number of discs	pcs	20	24
Total height	mm	1300	1300
Total width	mm	2240	2680
Total length	mm	5150	5150
Working width	mm	2240	2680
Diameter of discs	mm	560/610	560/610
Required power	hp	75-80	90-95
Total weight	kg	1800	1900
